

B6R: Three-way valve with female thread, PN 16

How energy efficiency is improved

Accurate control with high reliability.

Areas of application

Continuous control of cold and hot water or air in closed networks¹⁾. Water quality as per VDI 2035. Assembly with AVP 142 and AV43 actuators as a regulating unit.

Features

- Nominal pressure PN 16
- Nominal diameter DN15, DN25, DN40 and DN50 with reduction steps
- Basic characteristic equal percentage (F3 . .), . or linear (F2 . .)
- Linear mixing passage characteristic
- Characteristic equal percentage or linear
- With the spindle retracted, the valve is closed
- Application as control valve or diverting valve

Technical description

- Valve with female thread DIN EN ISO 228-1 G
- Valve body and seat in gun metal
- Stainless steel spindle
- Plug made of stainless steel DN15 or brass from DN20
- Stuffing box made of brass with EPDM wiper ring and double O-ring seal

Type	Nominal diameter DN	k _{VS} value m ³ /h	Valve plug material	Weight kg
B6R 15 F330	15	1	stainless steel	1.2
B6R 15 F320	15	1.6	stainless steel	1.2
B6R 15 F310	15	2.5	brass	1.2
B6R 15 F300	15	4	brass	1.2
B6R 25 F310	25	6.3	brass	1.6
B6R 25 F300	25	10	brass	1.6
B6R 40 F310	40	16	brass	3.4
B6R 40 F300	40	25	brass	3.4
B6R 50 F300	50	35	brass	4.6

Operating temperature ¹⁾	–15...130 °C	Valve stroke	14 mm
Operating pressure	up to 120 °C 16 bar up to 130 °C 13 bar	Dimension drawing	7M100
Valve curve	equal percent	Fitting instructions	MV 505574
Control ratio	50 (typical)	AVP142 Complete regulating unit	MV 505766

Complete type designation: Valve and drive each with F-variant

Valve: F-variant, technical data and accessories, see valve type table

Drive: F-variant, technical data, accessories and fitting position, see Section 71

Example: B6R 15 F300 / AVP142 F001

Valve control passage A-AB is closed when actuator is pressureless = factory setting

Valve control passage A-AB is open when actuator is pressureless = on request

Δp_{max} [bar] = Max. permissible pressure difference across the valve at which the drive can still safely open and close the valve.

Δp_s [bar] = Max. permissible pressure difference across the valve during malfunction at which the drive can close the valve.

p_{stat} [bar] = Dormant pressure at valve when pump is inactive. Takes into account the fluidic level of the plant and the pressure increase caused by the pressure tank or the steam pressure.

1) Based on the Centair air capacity (400 l_n/h) and a line of 20 m in length and 4 mm in diameter

2) When used with an XSP 31 positioner, the Δp_{max} values are seven times bigger; observe the Δp_v value (see additional technical details).

Operation

Using a pneumatic drive, the valve can be moved to any position. When the spindle is extracted, control passage A-AB is closed. Where pneumatic drives are used, the valves should not close with the pressure, otherwise pressure surges ensue.

Used as a control valve**Engineering and fitting notes**

Can be fitted in any position except facing downwards.

The ingress of condensate, dripping water etc., along the stem and into the drive should be prevented. When fitting the drive to the valve, care must be taken not to turn the valve plug on the two stops (seat), thus damaging the seal.

The drive can be equipped with the XSP 31 or XSP 31G positioner should any of the following be demanded: a split range; an improvement in the setting accuracy; an increase in positional speed or air capacity; reversible direction of action (see Section 79).

Additional technical details

Type	Δp_v
B6R 15 F . 30	4
B6R 15 F . 20	4
B6R 15 F . 10	4
B6R 15 F . 00	4
B6R 25 F . 10	4
B6R 25 F . 00	4
B6R 40 F . 10	3
B6R 40 F . 00	3
B6R 50 F . 00	2

Δp_v in bar = max. pressure difference across the valve in any stroke position, limited by the noise level and erosion (max. values without being limited by the force of the drive).

Additional details on accessories

0217268/ . . . Heating for stuffing box 15 W; housing of light metal; connecting cable $3 \times 0.75 \text{ mm}^2$, earth connection, 1 m in length, cable end sleeves; degree of protection IP 54.

Additional details on model types

Valve body with female thread. Flat seal of copper at the body. Stuffing box with O-ring of ethylene-propylene.

Material numbers as per DIN

	Material no.	Description	DIN norm
Valve body	2.1096.01	G-Cu Sn 5 Zn Pb (Rg 5)	1705
Valve seat	2.1096.01	G-Cu Sn 5 Zn Pb (Rg 5)	1705
Spindle	1.4305	X 8 CrNiS 18 9	EN 10088-3
Plug	2.0402.26	Cu Zn 40 Pb 2 F43	17 672
Plug B6R 15 F. 20...F. 30	1.4305	X 8 CrNiS 18 9	EN 10088-3
Stuffing box	2.0401.10	Cu Zn 39 Pb 3 F36	17 672

Explanation of terms used **Δp_v :**

Maximum permissible pressure difference across the valve in any stroke position, limited by the noise level and erosion.

The valve as a traversed element is defined by this parameter specifically in its hydraulic behaviour. By monitoring cavitation, erosion and the noise thus produced, improvements can be achieved in both life expectancy and durability.

 $\Delta p_{\max}$:

Maximum permissible pressure difference across the valve at which the drive can firmly open and close the valve.

Static pressure and fluidic influences are taken into account. This value helps to maintain smooth stroke action and valve sealing. In doing so, the valve's Δp_v value is not exceeded.

 Δp_s :

Maximum permissible pressure difference across the valve in the event of a malfunction (e.g. power failure) at which the drive can firmly close the valve and, if necessary, hold the full operating pressure against atmospheric pressure. Since this is a safety function with 'fast' stroke, Δp_s can be larger than $\Delta p_{\max}$ or, respectively, Δp_v . The resultant fluidic disturbances are soon overcome and play a minor rôle here.

On the three-way valves, the values apply only for the control passage.

 Δp_{stat} :

Line pressure across the valve. This corresponds largely to the dead pressure when the pump is switched off, e.g. due to the level of liquid in the plant, an increase in pressure via the pressure store, steam pressure etc.

Where the valves close with the pressure, the static pressure plus the pump pressure should be used.
